#### Deblister RBP Bauer D3600

Most of our customers have a D3600 installed near every blister line to improve their batch yield.

Equipped with speed control, magazine level monitoring, level sensors, counter and product-specific tool sets the machine ensures gentle and GMP-compliant recovery of pharmaceuticals which can thus be returned to the current production cycle.

The D3600 can handle push-through blisters lengthwise, crosswise or diagonally, depending on the pocket position and the convexity of the blisters.

Different product raws can be recovered separately.

It is also possible to use a manual feeder (e.g. for extremely blisters).

An optional brush roll working in opposite direction ensures the safe recovery of small products from large AI/AI pockets.

Version Mounted on mobile stainless steel workstation.

Size (L x W x H) 950 mm x 500 mm x 1100 mm.

Weight 110 kg.

Output infinitely variable, up to 60 blisters/min.

Format range (W x L) 150 mm x 120 mm.

Supply voltage 110/230 V AC/50-60 Hz.

Control voltage 24 V DC.
