Tablet Presses/Tablet Dedusters FETTE 2090

Images

Product details

Category:	Tablet Presses/Tablet Dedusters
Machine:	2090
Machine code:	25-1889
Manufacturer:	FETTE
Year of construction:	2003

Description

This modern high-speed tablet press is suitable for the production of tablets up to a maximum of 25 mm Ø. The machine can process interchangeable tablets. The Fette 2090 can also produce capsule-shaped tablets. The operating area of this tablet press is enclosed within four double-walled Perspex safety guards that allow easy access for cleaning or changing tools.

The drive motor and central lubrication system are located at the bottom of the machine and are accessible via large movable panels on all sides.

This machine can be connected to an external dust extraction system (not included) via connection connections located in the upper part of the machine housing.

The product to be filled is placed in a stainless steel hopper and guided through the motorised Fill-O-Matic powder feeder into the mould cavities. The powder feeder can be easily dismantled for cleaning.

The finished tablets are discharged through a chute, equipped with an electromechanical flap, which diverts the tablets during start-up, machine set-up and shut-down.

All operator controls are located on a separate dust-tight console.
