Manufacturer: Flexicon

Year of construction: 1998

Description

Filling machine for vials Flexicon mod. FMB 200 with rotating table for incoming vials mod. RT50

The liquid only comes into contact with a disposable liquid dispensing kit, so changing production from one liquid to another can be done quickly, without the risk of cross contamination.

The entrance of the vials takes place thanks to a rotary table mod. RT50 (VOLTS: 240 AC - WATTS: 50).

A production cycle can be set in less than 20 minutes, with a production change completed without assistance from outside the cleanroom.

Depending on the filling volume, the machine can process up to 4500 units per hour.

The machine is also equipped with stoppering and ring nut, with relative closure, all done automatically.
