## Product details

<b>Category:</b>	Complete Lines
<b>Machine:</b>	M92F + PG
<b>Machine code:</b>	IT484
<b>Manufacturer:</b>	Cam
<b>Year of construction:</b>	2006

## Description

This intermittently operating Blister packer is designed for the production of deep-drawn and sealed blister strips. The machine operates left to right and is arranged for variable speed operation with a maximum capacity of 40 strokes per minute.

After the blister is filled with ampoules. At the next station the web of blisters passes into a guillotine where the blisters are cut out. The blisters are placed onto a conveyor and are transferred to the Cartooning Machine.

Deep-draw foil is drawn from a reel on a separate reel-holder at the left and is fed to the heating- and deep-draw station where the blister pockets are formed with the assistance of compressed air.

At the filling station, product is fed into the formed blister pockets.

This machine is fitted with an automatic product infeed assembly where product is extracted from magazines (not included) and is then aligned and placed into the pockets.
