Product details

Category:	Sold
Machine:	NERI Turn Table before filling machine S6
Machine code:	22F52
Manufacturer:	Neri Marchesini
Year of construction:	1997

Description

Automatic bottle and vial blower linear type, complying with cGMP regulations, suitable for handling bottle range, complete with compressed air feed system complying with FDA standards.

Main features:

Basic machine with plate paneling in AISI304 stainless steel satin finish and with internal components which come in contact with the blowing air in AISI316L. Blowing air contact pipe work and components mirror lapped, with tri-clamp fittings. Internal plunger-needle blowing system. Intermittent vials / bottle blowing system. Accessibility to the internal working of the machine for cleaning operations. Bottles infeed in line to a tabletop conveyor belt, with provision to connection with the upstream machine and directly connected to the vertical blowing wheel.

Vertical air blowing wheel, complete with 16 pockets and 16 blowing needles. Circuit for compressed air blowing with sanitary piping, pressure reducer, PALL filter housing, membrane electro valve, spraying needles and suction manifold. Safety torque limiter on the blowing wheel. Underlying particles collection tank with 40 mm diameter suction orifice. Independent drive for conveyor belt and pocketed wheel with working speed control. Bottles out feed in line to a tabletop conveyor belt, with provision to connection with the downstream machine. Backup sensor on bottle out feed.
