Product details

Category:	Washing Machines for Ampoules and Vials/Blowing Table for Bottles
Machine:	IMA NERI LV 105 - C6
Machine code:	22F126
Manufacturer:	Neri Marchesini
Year of construction:	1997

INTIMAC S.R.L.

Via XXV Aprile, 8
21054 Fagnano Olona (VA) - Italia
Tel. +39 0331 1693557
email: inti@intisrl.it

Description

The Ima Neri is a linear washing machine for vials and bottles according to the machine working range of size

. Containers for sterile preparation are processed in a different way according to the material they are made of and the product to be filled. Tailored according to the nature of containers, the washing machine performs different washing cycles.

The use of a recycled water loop in our linear washing machines allows for an important WFI consumption saving for customers, while granting high cleaning performance and, when requested, pyrogen reductions. Machine highlights

Special upper guide rail for containers allowing for washing at high pressure without vibration or movement.

Complete segregation between process, circuit and mechanical areas to avoid cross contamination.

No vial breakages thanks to a system of levers, incorporating spring-loaded telescopic overload, driving machine movements, including raising of the washing needles.

No dripping of contaminated water from the baskets onto the vials thanks to the positive discharge of containers from the basket.
