The bicone mixer is used for mixing pharmaceutical powders.

It consists of a biconical container at the upper end of which there is an "A" port for manual product loading, on the lid of which there are two nozzles for automatic product loading. At the lower end is an unloading valve fitted with a TC blind plug and TC with a hose connection for discharging the product into the drum.

The rotation of the container is at a variable speed of 5-20 rpm, by means of an inverter.

Positioning for unloading is controlled by the inverter, via the stop given to the panel button.

A pneumatic cylinder, the supply of which is not included in the supply, ensures the mechanical stop of the positioning.

A 3-track recorder is provided for obtaining revolutions, time, and (other to be defined).

An analogue timer (inside the cabinet) with intermediate stop memory, sets the machining time. An electrical control panel, complete with inverter keypad and recorder, gives consent to the machine drives.

NB. - When the red emergency mushroom is pressed, it blocks all panel functions.

Features:

Container:

Useful capacity: 300 kg

Geometric capacity: lt 600

Product: Pharmaceutical powders
