**NEVER USED
WITH AUTOMATIC WASHING SYSTEM .**

GS IMA Coating Equipment HT is equipped with exhausting paddles for tablet film and sugar coating and is equipped with blowing paddles and is suitable for pellets and microgranules, The use of a solid wall pan allows the processing of all product sizes and shapes without clogging. The shape of the pan and surface smoothness ensure perfect mixing and uniform distribution of the coating material. The patented drying system guarantees that the drying air is conveyed directly through the tablet mass avoiding swirls and turbulences inside the pan. The paddles can be supplied in different sizes according to the quantity of product to be processed, thus ensuring a higher flexibility in terms of pan working capacities. The cleaning operations are fast and simple due to the use of a solid wall pan. Different cleaning programmes, comprising washing, rinsing and discharge, can be developed according to different products and stored in the recipes.
