#### Tube Filler Norden GmbH & Co Nordenmatic 700C

The plant was built in 1991 by Norden GmbH & Co KG. Since then it has been used to fill various sizes of pipes and to weld them at a later stage of work. In the end, the pipes are still encoded. 2 Including aggregates. The entire plant consists of a single aggregate, in which all the work phases are carried out one after the other. The compact design saves a lot of space without compromising functionality.

Production: 70 pcs. /min. Dimensions D x H in mm and Material

- 35 x 95 LLD/HD
- 40 x 120 LLD/HD
- 50 x 130 LLD/HD
- 40 x 165 LLD/HD
- 50 x 155 LLD/HD

Over the years, the system has undergone several changes. On the one hand, the original cutting station has been replaced by a linear cutting station so that the system is able to process plastic pipes.

In addition, the drive unit was only installed in 2020. The system has been used to fill hair conditioners and has been cleaned and disinfected after each contact with the product. It is therefore validated for the following media classes:

- Isothiazolinones + glutaralic disinfectants
- Weakly acid media (>3 Ph)
- Alkaline media (10,5-11 Ph)
- Ammoniacal media
