Product details

Category:	Liquid Filling and Closing Machines
Machine:	Nordenmatic 700C
Machine code:	IT295
Manufacturer:	Norden GmbH
Year of construction:	2002

Description

Automated bottling in Nordenmatic 700C dispensing systems

Year:2002 The plant was built in 2002 by Norden GmbH & Co KG. Since then it has been used to fill the dispensers according to the principle of "filling from below". These are then labeled online. All the movements for filling the bottle, lifting the bottle to be pressed into the piston and the piston pusher itself are performed by servomotors. Production: 70 pcs/min Dimensions D x H in mm and Material: 28 x 126 LLD/HD The complete servo technology was converted to an ELAU system in 2013/2014.

The system was used to fill various creams and gels and was cleaned and disinfected after each contact with the product. It is therefore validated for the following media classes:

- Isothiazolinones + disinfectants containing glutarals
- Low acid media (>3 Ph)
- Media containing ammonia
- Alkaline media (10,5-11 Ph).
