Product details

Category:	Sold
Machine:	RI 3
Machine code:	21-1243
Manufacturer:	KILIAN
Year of construction:	n/a

Description

This tablet press is suitable for the production of tablets up to a maximum diameter of 20 mm at speeds of up to 50,000 tablets per hour mechanical speed depending on the product .

The 20-station turret accepts Kilian tools.

The operating area is enclosed within three guards for noise reduction and to allow access to the drum table. The main motor, gear train and lubrication system are located in the lower part of the machine cabinet and are accessible via large removable panels on all sides.

The machine can be connected to a dust/vacuum extraction system (not included) via connection connections at the rear to ensure largely dust-free operation. The product to be compressed is fed into a stainless steel powder hopper and is guided via the motorised powder feeder type Fill-O-Matic into the mould dies.

The powder feeder can be easily disassembled for cleaning. The finished tablets are discharged sideways down a chute.
