## Product details

<b>Category:</b>	Autoclaves/Sterilizing Ovens/Freeze Dryers
<b>Machine:</b>	DLST
<b>Machine code:</b>	23-1235
<b>Manufacturer:</b>	DE LAMA
<b>Year of construction:</b>	1999

## Description

DLST/L Series (Class 100 - ISO 5) dry heat sterilizers are designed in accordance with cGMP Prescriptions to meet the multiple needs of the Pharmaceutical Industry and to perform the following treatments: Dry heat sterilization is an ecologically non-polluting process that does not generate waste or inconvenience problems for the environment or personnel. At the same time, the process fulfills the most stringent requirements for bacterial load reduction. Possibility of realization in execution suitable for continuous operation up to 300°C with the use of HEPA filters equipped with special sealant. Main applications: empty glassware (e.g., vials, bottles) stainless steel accessories (e.g., trays, machine parts) various moisture-fearing materials basic pharmaceuticals and thermostable chemical compounds non-aqueous liquids (e.g., oils, glycerins, etc.) The chamber is available in horizontal execution. Only components of the highest quality and reliability, available internationally, are used in the construction of De Lama sterilizers to ensure ease of replacement and maximum system life.
