## Product details

<b>Category:</b>	Cartoning Machines/Case packers
<b>Machine:</b>	4046E
<b>Machine code:</b>	IT322
<b>Manufacturer:</b>	Uhlmann
<b>Year of construction:</b>	2010

## Description

---

### Highly flexible end-of-line packer for cases ready for dispatch

The Case packer packages cartons filled with solid or liquid dose blisters, or bundles of cartons, in cases ready for dispatch. The steps cover erecting the case blanks, loading from the side, and two-sided closure of the case. Operation of this machine is extremely space-saving, and the erecting and turning station ensures optimum utilization of the case volume. In addition, the modular design allows flexible adaptation of the configuration to meet customer requirements. The ergonomic design not only gives the user optimum accessibility, but also facilitates servicing and cleaning. One example here is access to the case magazine from the operating side. Fast format changeovers and straightforward handling make the machine very efficient. Operation via the central SmartControl operating system is intuitive and easily comprehended. The Case packer can be seamlessly integrated into an Uhlmann line. In terms of performance and operation, it is the optimum solution downstream from an Uhlmann cartoner.

### Wide format range

The infinite format adjustment of the machine enables the flexible processing of a variety of case sizes. The wide format range is also a convincing feature: small to large cartons and cases – all can be handled.

### From cartons to packed cases ready for dispatch.

The Case packer groups, stacks, and packages pharmaceutical products in cases ready for dispatch – the cardboard blanks are erected, the cases filled, and then closed on two sides.

### Reliable process and uninterrupted production

Integrated safety and warning devices enhance the reliability of the Case packer – after all, every conveyor stop has an impact on the overall efficiency. Examples here are the jam control and overload monitoring.

### Disruptions in the packaging process trigger a warning.

### Case packer– numerous benefits in its favor

**Ready for dispatch:** The machine uses side-loading to package cartons or bundles in cases ready for transportation – the cardboard blanks are erected, the cases filled, and closed on two sides.  
**Flexible:** Infinite format adjustment to cater for a wide range of carton sizes gives the machine maximum packaging flexibility.  
**Ergonomic:** GMP-compliant, ergonomic design gives the user good accessibility to the case magazine and permits easy cleaning of the working stations.  
**Economical:** Fast, easy format changeovers contribute to high productivity.  
**Integrated:** The SmartControl operating system, design, and software of the Case packer allow full integration into an Uhlmann line.  
**Reliable:** Integrated safety and warning systems, e.g., jam control and overload monitoring, ensure smooth processing.  
**User-friendly:** Operation of the machine via the central SmartControl operating system is intuitive and easy to understand.
